

Features that really make a difference!

Self Contained - The "Rap Strap Machine" is a self-contained, easy to handle machine (the strapping coil is on the machine). This allows the machine to be loaded threaded and tested prior to being inserted into the line. This Cranston exclusive speeds up machine exchanges and reduces steering difficulties associated with systems that utilize remote mounted coils or coil trailers.

QC Coil Chuck - The "Rap Strap Machine's" unique coil chuck is angled, allowing the operator to approach the machine for coil loading from two directions. This feature reduces the overall length of the Rap Strap machine and offers virtual "lift free" pallet-to-machine coil loading.

Power Assist "Quick Feed" - This system provides remarkably fast re-threads.

a) the operator inserts the end of the strap into the feed chute until it reaches the drive wheels (paused for safety) b) the operator slides the strapping that spans between the feed chute and the coil into the strap guide c) the operator activates the rethread cycle on the touch screen.

Power Assist "Strap Clearing" Once detected by the out-of-strap sensor, the end of the strap is stopped (prior to being pulled into the machine), the drive automatically opens, and the controls enter the rethread mode for the remnant to be pulled free.

Maintenance Friendly - With creative use of simple electric and pneumatic systems, Cranston's "level 1 diagnostics" and a very comprehensive Operation and Maintenance manual, most maintenance teams will find the Cranston "Rap Strap System" very easy to understand and support.

Cranston has incorporated International components, such as the Siemens S7 300 PLC, MicroMaster VFD's and color touch screen, SEW motors, Parker valves, Turk proximity switches and metric fasteners.

Specifications

Machine weight (without coil): 1500 lbs. (680kg).

Speed:

Minimum strap cycle is subject to package and machine sizes. Maximum bale per hour rate is subject to site conditions and strap pattern.

Contact Cranston Machinery for a site review.

Requirements

Electrical: 10Amp, AC / 3 PH / 50-60HZ.

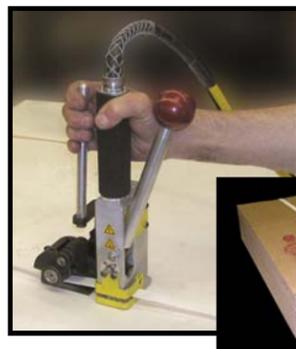

Pneumatic: 15 CFM (423 L/M) @ 80 PSI (5.5 Bar) with 1/2" (12mm) line.

Conveyor: Sunds (Metso) brand 4 row chain conveyor (minor adjustments may be required).

Customer must provide suitable control interlocks and receptacles for the umbilical cords.

Repulable paper strapping: Cranston's Rap Strap, (or equal).

Alternate Models

Handi-Bander

Designed for applications requiring manual strap tension and sealing.

Model 70B002

For interchange with a Cranston or Oval brand wire strapper.

All products and services are covered by Cranston standard terms and conditions, including limits of liability and warrantee effective at the time of sale. Available upon request.

Technical Specification Z006 1108

Rap Strap Machine

Model 70B004

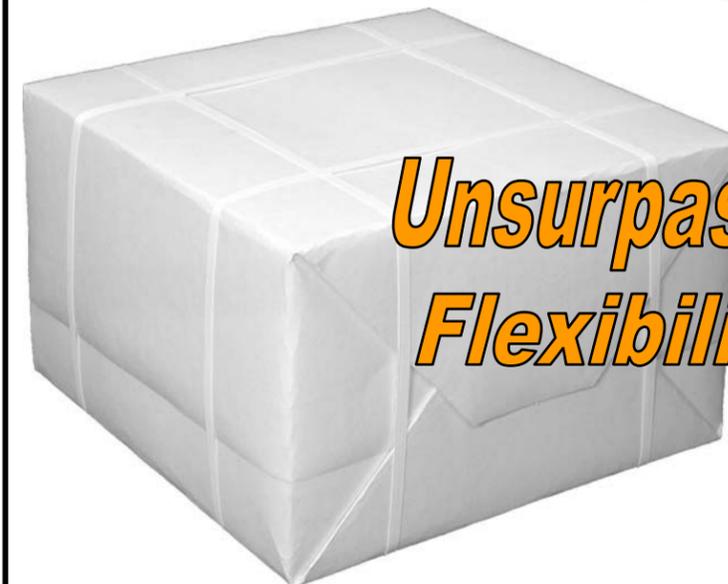

The Cranston Model 70B004 Rap Strap Machine is designed to interchange with most Sunds (Metso) brand non hinging wire strapper conveyor.

US Pat. 6,546,696

Canadian Pat. 2,438,352

European pat no. 1360112.

Other US and Foreign patents pending.

Unsurpassed Performance, Flexibility and Features!

- Patented "Thru-Strap" Heat seal Technology!
- Welded steel frame
- Jumbo coils without lifting!

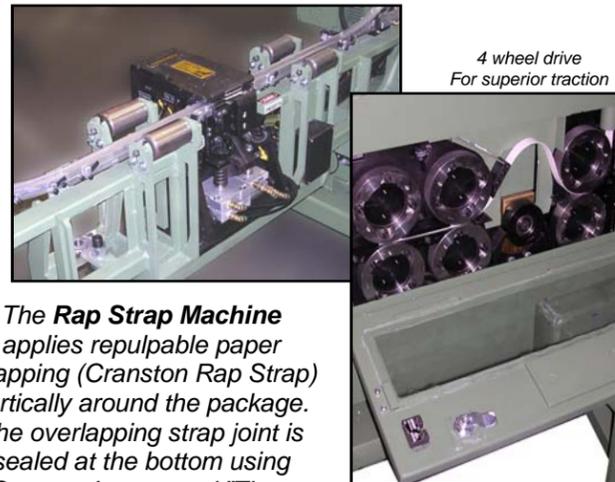

Series 2005 - Rap Strap System

The Rap Strap System is a complete solution, designed to satisfy your wireless bale needs. The system consists of a flexible robust strapping machine, a high strength repulpable paper strap, and an accessories package to optimize machine loading, maintenance and operation.

CE certified.

Rap Strap Machine

4 wheel drive
For superior traction

The Rap Strap Machine applies repulpable paper strapping (Cranston Rap Strap) vertically around the package. The overlapping strap joint is sealed at the bottom using Cranston's patented "Thru-Strap" heat seal technology.

Compare!

Reliability - Industries best!

Since 2001, Cranston's "Rap Strap Systems" have been in the field, hard at work, proving this claim. The equipment has been designed for the traditional pulp mill environment. It is exceedingly robust, fast, and when combined with Cranston's Rap Strap, provides minimum operator attention. Standard features like the ability to run strapping splices, On-screen Diagnostics, Alarm History and Modular components further optimize uptime!

Efficiency - Industries best!

Cranston's exclusive, pallet-to-machine Jumbo coil loading reduces operator attention, strapping loss, and packaging waste by up to 75% over systems that rely on manually lifted 1/4 size coils. The "self contained" machine design further raises the bar of efficiency – faster machine exchanges and less strap waste. **If your target is load and go! Choose the Cranston Rap Strap**

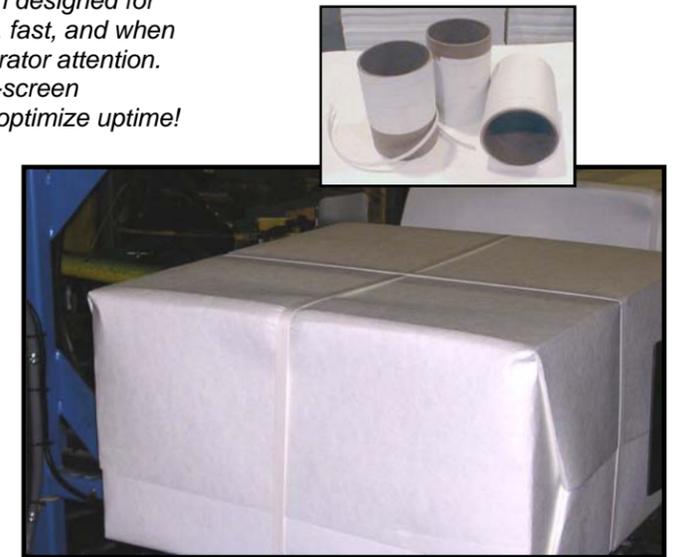

Seal Strength - Industries best!

Cranston's patented "Thru-Strap" seal technology is another Cranston exclusive and was designed specifically for paper strap.

By compressing the band and heating from the outside of the straps, the heat is driven through the strapping material assuring a complete adhesive bond. Other systems are based upon plastic strapping technologies that only heat the inner surface of the strapping and do not incorporate an adequate press cycle. "Thru-Strap" seal technology provides significantly higher strap strength so you get the most the strapping has to offer!

Heat Seal Safety - Industries best!

Cranston's Rap Strap seal head operates at an average temp of 375° F. Well below the typical 451° F flashpoint of paper. Competitive machines run at over 700°. **If safety is one of your primary concerns! Choose the Cranston Rap Strap**

Accessories

Some guarding is not shown

Each, Series 2005 "Rap Strap System", includes a Test Bale and a Coil Hook or Floor Dolly for remarkably fast and easy transfer of Jumbo coils from the pallet to the Quick Change Coil Chuck!

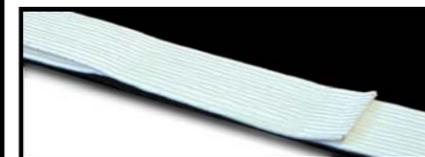

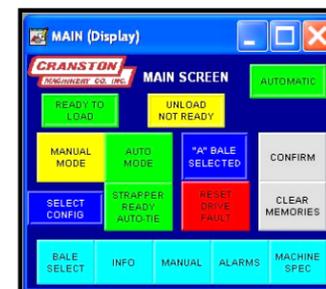

RAPSTRAP

Jumbo Coils are individually bagged to optimize moisture protection during warehousing, delivery and storage

Individually bagged.

See Rap Strap brochure Z001

Flexibility!

Adjustable swing arm - for viewing the operator screen from up or downstream of the machine.

A single Rap Strap Machine can be used for left hand right hand or auto reverse applications.

When a Cranston conveyor is used, the standard Rap Strap Machine's controls offer enhanced bale positioning options.

- **Strap positions (0-3)**
- **Stacking:** to create a 2 x 1 or 2 x 2 pattern on the bottom bale (for increased durability) and a 1 x 1 pattern on the balance of the stack (to optimize strapping usage).
- **Stagger straps:** offsets the straps so that they do not rest on top of one another when stacked

"A complete system designed for flexibility and performance".

Cranston's bale line experience pays off!
